

01 / BEFORE YOU PRESS RECORD

Start with a short test.

Use your phone, laptop camera, or current setup. Listen and watch before deciding what to change.

- ☐ Confirm the account, destination, title and audience setting.
- ☐ Close private tabs and quiet notifications before sharing a screen.
- ☐ Record speech plus any guest or game audio; play it back.
- ☐ Check framing, focus, light and the size of shared text.
- ☐ Keep your opening question and mute/end controls within reach.
- ☐ Afterward, confirm the stream ended and the recording plays.

One thing I heard or saw that I want to change:

Change ONE setting or position, then record again:

Use the interactive checklist and full guide

<https://www.hexglenn.com/resources>

Measure the awkward part.

A desk can look right and still be too high, too cramped, or hard to reach. Write down what your current setup does before shopping.

Desk height while seated / desired height:

Space under the desk and room for the chair:

Monitor position / what blocks the usable tabletop:

Cable that reaches the least / where it needs slack:

What changes if I add wheels, an arm, or an under-desk bracket?

Before raising a motorized desk, check cable slack and clear the path. Follow the desk instructions; do not rely on obstacle detection as a safety guarantee.

My desk with wheels: the height tradeoff

Try one small patch.

Use a suitable blank area or spare paper from the same edition. Thin paper can show a mark from the reverse without ink bleeding through.

Book / edition / paper used:

Marker and color / number of passes:

After drying: reverse visibility / ink on reverse surface:

Smudging or transfer to the facing page:

Would I use this color and pressure on a full page?

Compare results on the same paper. A result from another edition is not a promise about yours. Start with one marker if that is all you need.
